Space and Naval Warfare Systems Command Awards Contract

SAN DIEGO – Smiths Detection, Edgewood, Md., is being awarded a \$8,452,018 firm-fixed-price/cost-plus-fixed-fee modification to contract N00039-12-C-0089 for procurement of four Meteorological Mobile Facility Replacement-Next Generation (METMF(R)NEXGEN) systems and associated engineering services.

The METMF(R)NEXGEN system is a mobile meteorological and oceanographic weather information system that enables U.S. Marine Corps personnel to generate, collect and correlate weather data to provide the best environmental picture in support of ongoing and future military operations.

Work will be performed in Edgewood, Md., (90 percent), and Dallastown, Pa. (10 percent), and is expected to be completed by July 2013.

Contract funds will not expire at the end of the current fiscal year.

This contract action was not competitively procured because the government determined after conducting market research that Smiths Detection was the only responsible source capable of producing and delivering the four METMF(R)NEXGEN systems without substantial duplication of cost and unacceptable delay in fulfilling the government's requirements.

The Space and Naval Warfare Systems Command, San Diego, is the contracting activity (N00039-12-C-0089).
